CURLIN® ENTERPRISE SOLUTION
SOFTWARE (A)(Rx)(S)

A comprehensive infusion software suite developed specifically for home infusion.

For years, smart infusion pumps and software designed for use in acute care settings have been used to prevent medication errors.

CURLIN's Enterprise Solution Software was developed to offer the same level of protection for infusions delivered at home.

The new CURLIN Enterprise Solution Software was developed specifically for use in home care settings to simplify programming, reduce the likelihood of infusion-related errors, and streamline pump management and maintenance.

The CURLIN 8000 Ambulatory Infusion Pump seamlessly integrates with the CURLIN Enterprise Solution Software suite to ensure medications are delivered safely, and precisely as intended.

CURLIN® ADMIN MANAGER

CURLIN® Rx MANAGER®

CURLIN® SERVICE MANAGER

CURLIN Admin Manager allows pharmacy and IT administrators to manage the CURLIN Enterprise Solutions Software, including network settings, user management, system reports, and more.

Designed with extensive input from home infusion pharmacists, **CURLIN RxManager** is a medication safety software that helps you manage your patients' therapies safely and efficiently.
(more information on reverse side)

CURLIN Service Manager provides biomedical engineers with a simple interface to perform preventative maintenance on CURLIN 8000 pumps, check service history, and view historical pump event information.

CURLIN® RxMANAGER®

CURLIN RxManager is an all-new medication safety software that helps you manage your patients' therapies safely and efficiently. It was developed with extensive input from home infusion pharmacists, seamlessly integrates with the CURLIN 8000 pump, *and complements existing home infusion workflows for both pharmacists and nurses.*
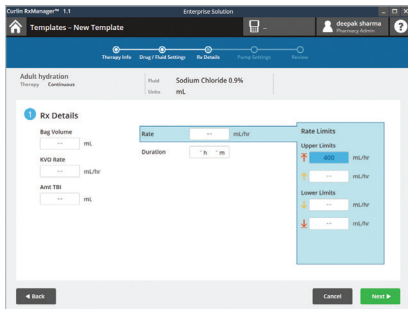

Your business, your rules: Easily create facility-specific pump configurations, drug and fluid lists, common protocol templates, and clinical advisories. It is designed to be flexible and evolve with your pharmacy's practice.
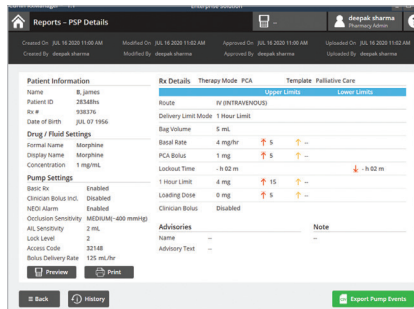

Patient-specific protocols: Quickly create PSPs (Patient Specific Protocols) - a custom set of therapy parameters for each patient that may include rate-based hard and soft limits, alarm settings, lock level, access code, infusion programs, and more.
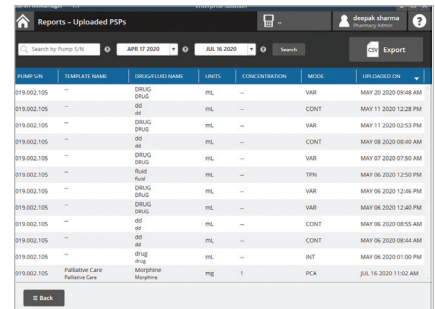

Patient-specific safety: Once created, PSPs are easily uploaded to a connected CURLIN 8000 pump with the click of a button, protecting your patients from potential programming errors which can occur in the pharmacy or at the bedside.
